JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index

Apparatus
- for bismuth telluride foils 773
- for chemical beam epitaxy 486
- for group IV materials 789
- for levitating crystal growth 1013
- for metalorganic molecular beam epitaxy of gallium arsenide 435
- for rapid enlargement of ingots 767
- for real time process monitoring 290

Cellular growth
- of ice 167
Computer simulation
- of Bridgman growth of benzene 934
- of finite volume method 55
- of gibbsite growth 159
- of melt composition 734
- of solute diffusion 1
Constitutional supercooling
- of bismuth telluride 773
- of potassium chloride 167
Convection 734, 751, 934

Dendritic growth
- of quasi crystals 963
Device characterization
- electronic materials 666
- heterojunctions 424, 440, 454, 537, 572
- lasers 15, 537, 661
- resonant tunneling diodes 315
- photonic dots 518
- quantum wells 8, 15, 27, 424, 450
- quantum wires and dots 572, 994, 1004
- semiconductor optical amplifiers 471
- solar cells 486
Diamond 779, 999
Diffusional control
- of beryllium 459
Dislocations
- in silver bromide 911

Electronic materials, see Device characterization
Epitaxy, see Thin film growth

Etching
- by surface oxidation 509
- chemical 263, 666, 855
- - of borates 102
- photolithographic 499
- thermal 267
Eutectic growth
- of manganese bismuth 110

Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of aggregation and agglomeration 924
- of dislocations 716
- of growth 43, 110, 146, 225, 297, 306, 355, 440, 572, 591, 963
- of interface control 242, 290, 297, 321, 424, 970
- of nucleation 198, 258, 492, 661

Lasers, see Device characterization
Lasers, crystals for
- of barium borate 861
- of bismuth tellurite 855
- of $Ca_3(Nb_{0.9}Ga_{0.09}Cr_{0.01})_{1.875}Ga_3O_{12}$ 867
- of lithium yttrium fluoride 906
- of potassium yttrium tungstate 895
- of yttrium aluminum oxide 874

Melt growth technique
- by Bridgman–Stockbarger method
- - of benzene 934
- - of cadmium telluride 709
- - of indium antimonide 175
- - of indium phosphide 21
- - of lithium yttrium fluoride 906
- - of potassium yttrium tungstate 895
- by Czochralski method
- - of aluminum tungstate–lutetium tungstate 217
- - of borates 102
- - of lanthanum neodymium gadolinium oxide 75
- - of silicon 55
- by floating zone method
- - of barium boron aluminate 850

PII: S0022-0248(00)00003-8

– – of bismuth tellurite 855
– – of gallium indium antimonide 625
– by uniaxial solidification
– – of ice 122
– – of indium antimonide 175
– – of lamellar eutectic 181
– by zone melting
– – of cadmium zinc telluride 701
Microgravity, growth under
– of tin bismuth alloys 970
Morphological stability
– of amino acid 138
– of dislocations in silicon 716
– of growth sectors 81
– of ice 167
– of silicon germanium 311
– of zinc oxide 526, 532

Nucleation
– of gallium arsenide 591
– of quasi crystals 963
– of silicon dots 1004
Numbers
– Grashof 734, 970
– Peclet 734, 970
– Schmidt 970

Phase diagrams
– of indium arsenide–gallium arsenide 504
– of lysozyme 130, 1018
– of oxide systems 890
Precursor
– for III–V compounds 272

Quantum wells, see Device characterization
Quantum wires and dots, see Device characterization

Solution growth technique
– by chemical deposition
– – of cadmium selenide 695
– by flux method
– – of borates 102, 861
– – of lead magnesium niobium titanium oxide 81
– by hydrothermal growth
– – of gallium nitride 208
– – of pyrite nickel diselenide 213
– by levitating growth 1013
– by sputtering 50
– theory
– – of growth mechanism 138
– – of L-lysine-doped triglycine sulphate 220
– – of supersaturation of lysozyme 130
Stefan problem, or moving boundary problem
– of meniscus 983
– of mercury cadmium telluride 751
Superlattices, multilayers
– of magnesium oxide 91
– of oxides 828
– of silicon germanium carbide 789
– of III–V compounds 8, 247, 648, 994
Surface energy, determination
– of gallium arsenide 431
Surface structure
– of gallium arsenide 225, 267
– of gallium phosphate 637
– of gallium phosphate antimonide 637
– of gibbsite 159
– of indium phosphide 225
– of magnesium oxide 91
– of silver bromide 911
– of zinc oxide 532

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of silicon 327
– by gas source molecular beam epitaxy
– – of tallium gallium arsenide 547
– – of tallium gallium phosphide 547
– by liquid phase epitaxy
– – of gallium phosphide 666
– by metalorganic molecular beam epitaxy
– – of aluminum arsenide 286
– – of aluminum gallium arsenide 286
– – of gallium arsenide 286, 435, 509, 614, 621
– – of gallium indium arsenide 499
– – of gallium nitride 392
– – of indium phosphide 499
– – of zinc sulphide 518
– by molecular beam epitaxy
– – of aluminum arsenide selenide 247
– – of aluminum gallium arsenide 37, 440, 445, 994
– – of aluminum indium arsenide 8
– – of aluminum indium phosphide 459
– – of aluminum oxide 537
– – of gallium arsenide 37, 258, 431, 440, 572, 591, 648, 724
– – of gallium indium arsenide 8
– – of gallium indium nitride 364, 401
– – of gallium indium nitride arsenide 345
– – of gallium indium phosphide 459, 653
– – of gallium nitride 355, 364, 368, 373, 378, 382, 387, 396, 537, 816
– – of gallium nitride arsenide 648
– – of germanium silicon alloys 302
– – of indium arsenide 572, 630, 661
– – of indium gallium antimonide 450
– – of indium gallium arsenide 242, 247, 440, 445, 504, 994
– – of indium gallium phosphide 471
– – of indium phosphide 237, 450, 661
– – of lead strontium selenide 763
– – of manganese antimonide 552, 556
– – of manganese arsenide 599
– – of silicon 331
– – of silicon carbide 415
– – of silicon dioxide 331

- - of zinc oxide 522, 526, 537, 816
- by pulsed laser deposition 68, 883
- by vapor growth technique
- - through evaporation and condensation
- - - of aluminum nitride 406
- - - of p-nitrophenyl nitroxide 146
- - - of silicon carbide 767, 801
- - - of zinc selenide 675, 687
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of gallium indium nitride arsenide 339, 350
- - - of silicon 716, 807
- - - of zinc chloride 822
- - - of zinc oxide 822
- - through hot-wire chemical vapor deposition
- - - of silicon 335
- - through metalorganic chemical vapor deposition
- - - of aluminum indium antimonide 567
- - - of aluminum indium nitride 419
- - - of aluminum nitride 410, 419
- - - of gallium arsenide 43
- - - of gallium indium arsenide 27
- - - of gallium indium arsenide phosphide 424, 463
- - - of gallium indium phosphide 605
- - - of gallium nitride 203, 419, 581
- - - of indium antimonide 567
- - - of indium gallium arsenide 476
- - - of indium gallium arsenide phosphide 476
- - - of strontium tantalum oxide 1009
- - - of zinc selenide 279, 683
- - - of zinc sulphide 279
- - - of zinc sulphide selenide 279
- - through pulsed laser deposition 828, 842
- theory
- - of growth modes 637

Vapor growth technique
- by chemical transport
- - of zinc selenide 542
- by physical transport
- - of zinc selenide 542

Vapor–liquid–solid growth
- of silicon 513

Whisker growth
- of silicon carbide 801
